## 11. TOXICOLOGICAL INFORMATION

Skin Corrosive	: None	
Skin Irritant (rabbit)	: Not an irritant	Eye Irritant (rabbit): Not an irritant
Human Patch	: Not available	
Sensitization	: Skin (guinea-pig)	: Not a sensitizer
Acute Toxicity	Swallowed→LD50 (rat)	: > 5.0 g/kg (practically non-toxic)
	Skin→LD50 (rabbit)	: > 5.0 g/kg <sup>1)</sup> (practically non-toxic)
	Inhaled→LC50 (rat)	: > 4.1mg/L/4hr <sup>1)</sup> (practically non-toxic)

Chronic Toxicity : The results obtained from a Xerox sponsored, Chronic Toner Inhalation Study, demonstrated no lung change in rats for the lowest (1mg/m<sup>3</sup>) exposure level (i.e. the level most relevant to potential human exposure). A very slight degree of fibrosis was noted in 25% of the animals at the middle (4mg/m<sup>3</sup>) exposure level, while a slight degree of fibrosis was noted in all the animals at the highest (16 mg/m<sup>3</sup>) exposure level. These findings are attributed to "lung overloading", a generic response to excessive amounts of any dust retained in the lungs for a prolonged period. This study was conducted using a special test toner to comply with EPA testing protocol. The test toner was ten times more respirable than commercially available Xerox toner, and would not be functionally suitable for Xerox equipment.<sup>1)</sup>

Carcinogenicity : Carbon Black is classified as "Group 2B(possibly carcinogenic to humans)" by IARC. But we obtained the results from a Chronic Toner Inhalation Study, that commercially available Xerox toner has no evidence of human carcinogens. All other ingredients are not classified as "Carcinogens<sup>ref.1)</sup>".

Mutagenicity: Ames Assay: Negative

Reproduction and Development: Not classified as "Reproductive and Development chemicals<sup>ref.2)</sup>".
